Questions

1> Alica Ian Uma Tom → 0 words
5 3 3 3

"Anna Evan Oliver Tom" → 3 words

2> ④ ④ ⑥

3> "An@na Evlan T#om" → 0 words
④ ④ 3 output -2 words

input() split()
John Singh
John / Singh
['John', 'Singh']
len() % 2 = 0
['John Singh']
John Edm

4
```
namy = Alice Ian Uma Tom .split(', Anna
count =0
for word in names:
    new_word = ''
    for ch in word:
        if (ch.isalpha())
            new_word +=ch
    if new_word[0] in 'aeIouAEIOU' and len(new_word) %2==0
        count +=1
print(count)
```

① Starts (aeiou,
② len ~~eve~~ eve
③

② 1 0 1

① Binary to decimal code
decimal_number = int ("1001", 2) → o/p → ⑨ must be string
int(a,2)

8 4 2 1
1 0 1 0

② to convert decimal to binary)
bin(9) = 0b1001 → o/p ⇒ Stry ② 20
bin(9) [2:]

names = [
]

bin(10)
0b1010

③

aBcD immediate case change the count

Count = ~~0~~ ~~1~~ ~~2~~ 3

0	1	②	3
a	B	c	D

i i+1 stop at ~~last~~ second last index

count = 0

if there a case change then change

Code

```
s = input()
count=0
for i in range (0, len(s) -1):
        if (s[i].islower() and s[i+1].isupper())
                              or
             (s[i].isupper() or s[i+1].islower()) !

             count +=1

print(count)
```

④ "Apple orange elephant cat"   output: elephant

[5] [6] [8]

vowel :- ('a', 'e', 'i', 'o', 'u')

Find the longest word in a given list or sentence that starts with a vowel.

[Apple, orange elephant]

```
S = input()
names = s.split()
result = '00'
max_len = 0
for word in names:
        new_word = ''
        for ch in word:
            if ch.isalpha():
                new_word += ch

        if (new_word[0]. in 'aeiouAEIOU' and
                    len(new_word) %2 == 0):

            if (len(new_word) > max_len=0)
                result = new_word)

print (result)
```

golden rules

① return the count means declare count variable

② return the word declare a word with empty string
